

# TGFB1

**Transforming growth factor**, beta-induced, 68kDa, also known as TGFB1 (initially called BIGH3, BIG-H3), is a protein which in humans is encoded by the TGFB1 gene, locus 5q31.

RNAseq expression analysis identified a panel of genes involved in the regulation cell invasion/migration and a three-gene signature, **TGFB1**, **IGFBP3**, **CHI3L1**, that are overexpressed in quiescent cells and correlates with poor **glioblastoma** (GBM) patient survival <sup>1)</sup>.
