

Traumatic aneurysm treatment

Although there are [case reports](#) of [spontaneous resolution](#), [treatment](#) is usually recommended. [Internal carotid artery aneurysms](#) at the [skull base](#) should undergo [trapping](#) or [endovascular embolization](#). Peripheral lesions should be treated surgically with [clipping](#) of aneurysm neck, excision of the aneurysm, [coiling](#), or [wrapping](#) if no other method is feasible.
