Traumatic brain injury (TBI), also referred to as **intracranial injury**, occurs due to **trauma** to the **brain**. It can cause a range of physical, cognitive, behavioral, social and emotional symptoms. Its **outcome** can vary from complete recovery to permanent disability or **death**. TBI can occur due to an accident, physical violence or a fall. Its diagnosis involves the use of techniques like **magnetic resonance imaging** (MRI) and **computed tomography**. Depending on the extent of the injury, confirmed through a diagnosis, treatment can be minimal or extensive involving **medications**, surgery and rehabilitation therapies. This **book** discusses the fundamental as well as modern **approaches** in the assessment and management of traumatic brain injury. The topics included in this book are of utmost significance and bound to provide incredible insights to readers. It will prove to be immensely beneficial to students and researchers in this domain.
