

Urticaria

Hives, also known as urticaria, is a kind of skin rash with red, raised, itchy bumps.

They may also burn or sting.

Often the patches of rash move around.

Typically they last a few days and do not leave any long-lasting skin changes.

Fewer than 5% of cases last for more than six weeks.

The condition frequently recurs.

An unexpected challenging airway: Urticaria factitia caused difficult mask ventilation and tracheal intubation ¹⁾.
